Ghaziabad, Uttar Pradesh, India

EDUCATION

KIET Group of Institutions

Ghaziabad, India

B.Tech in Computer Science & Engineering (AI & ML)

2024 – 2028

Coursework: Data Structures & Algorithms, Machine Learning, Cloud Architecture, Full-Stack Workflows

TECHNICAL SKILLS

- **Languages:** Python, SQL, JavaScript, TypeScript, C++, C, Dart
- **Generative AI & Agentic Systems:** LLM Applications, RAG, Agentic Workflows, Tool/Function Calling, MCP, Prompt Engineering, Structured Outputs, Pydantic Validation
- **AI Frameworks & Libraries:** LangGraph, LangChain, FastAPI, Streamlit, PyTorch, TensorFlow, Keras, Scikit-Learn, Pandas, NumPy
- **Knowledge Retrieval:** Vector Databases, Embeddings, Semantic Search, Retrieval-Augmented Generation (RAG), Knowledge Retrieval Pipelines
- **APIs & Backend:** REST APIs, API Integration, WebSockets/Streaming, FastAPI, Node.js, Express.js
- **Data & Analytics:** Python Data Processing, SQL, EDA, Data Validation, Statistical Analysis, Data Pipelines, Predictive Modeling
- **Cloud & Infrastructure:** Google Cloud Firestore, AWS (Glue, Kinesis, Lambda, S3, Redshift), Docker, GitHub Actions, CI/CD, AWS Deployment
- **Engineering:** System Design, Git, GitHub, Linux/Ubuntu, Integration Testing, Distributed Systems Fundamentals

WORK EXPERIENCE

Data Analyst Intern | *Bluestock Fintech*

Jun 2026 – Aug 2026

- Engineered investor cohort and SIP continuity analysis workflows to identify at-risk accounts and automate risk-based fund routing.
- Built automated reporting workflows and reusable data pipelines using Python, Pandas, NumPy, and Jupyter for recurring financial analysis.
- Calculated Historical Value at Risk (VaR 95%) and Conditional VaR (CVaR) across 40+ investment schemes to support risk analysis.
- Analyzed mutual fund performance using 90-day rolling Sharpe ratios and sector concentration through Herfindahl-Hirschman Index (HHI).

Open Source Contributor | *GirlScript Summer of Code (GSSOC 2026)*

May 2026 – Present

- Implemented feature updates and architecture patches across Django and Flutter codebases in collaborative open-source projects.
- Maintained Git branching workflows, submitted production-grade pull requests, and resolved upstream merge conflicts.
- Participated in peer code reviews, integration validation, debugging, and engineering standards verification with project administrators.

AI & DATA PROJECTS

Agentic Knowledge Research & Decision System – In Development

Python, LangGraph, MCP, RAG, Vector DB, Streamlit

[GitHub](#)

- Building an agentic knowledge research system using LangGraph to orchestrate LLM reasoning, state management, conditional routing, and multi-step tool execution workflows.
- Implementing LLM–tool interaction loops with structured tool calling, reusable tool nodes, and conditional execution for agent-driven research workflows.
- Integrating MCP-based tool connectivity and developing a RAG pipeline using embeddings and vector database retrieval to ground LLM responses in relevant knowledge.
- Building an interactive Streamlit interface for research workflows, agent execution, retrieved context, and decision support.

Autonomous AI Portfolio Assistant

Python, FastAPI, Groq, Firestore, RAG

[Live Demo](#) | [GitHub](#)

- Designed a production-style AI backend using FastAPI, streaming endpoints, and LLM tool calling, achieving sub-400ms time-to-first-token (TTFT).
- Built a RAG and tool-calling workflow with Pydantic validation, strict guardrails, human-fallback criteria, and Google Cloud Firestore for persistent conversational state and session management.

ReconZero: AI Financial Reconciliation Engine

Python, FastAPI, Pandas, React, Groq API

[Live Demo](#) | [API Docs](#) | [GitHub](#)

- Architected an AI-powered reconciliation pipeline combining deterministic regex fast-paths with LLM-based structured JSON extraction for irregular financial transaction narrations.
- Optimized LLM processing by batching 25-item workloads, reducing API calls by 96% and eliminating rate-limit bottlenecks.
- Implemented deterministic financial reconciliation using Pandas vectorized joins to maintain exact decimal parity and prevent model-generated calculation errors.
- Built a responsive React analytics dashboard for identifying Payment Gateway MDR fee drift across expected 1.0%–3.0% ranges.

CERTIFICATIONS & LEADERSHIP

- **AWS Certified Data Engineering Associate (DEA-C01):** AWS Glue, Kinesis, Lambda, Redshift, S3 pipelines, IAM governance.
- **AWS Certified Cloud Practitioner (CLF-C02):** Cloud security baselines, serverless architecture, and cost-optimization models.
